

We are working together with other 500 B Corps to achieve Carbon Neutrality by 2030.

The first step to achieve this goal is the measurement of direct and indirect greenhouse gas (or GHG) emissions generated by our activities.

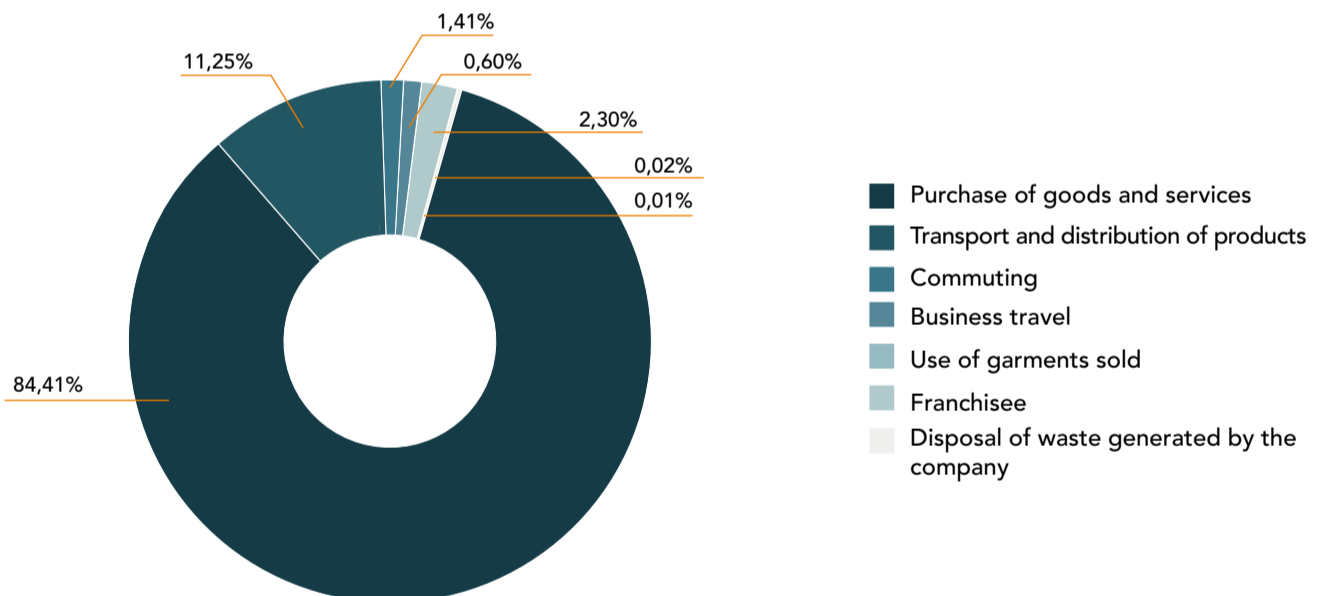

We started this monitoring process in 2018, and today we have Save The Duck GHG emissions inventory for 2019.

Save The Duck GHG emissions include the emissions of Purpose 1 (direct emissions), Purpose 2 (indirect energy emissions) and Purpose 3 (other indirect emissions).

Total emissions 2019:

Scope 3 emissions:

OUR GOALS

Based on the results of the GHG emission inventory, we are defining the actions to neutralize our carbon footprint. These include, for example, the following:

- Neutralize Scope 1 emissions by 2021;
- Source 100% of renewable electricity by 2021 for our flagship stores;
- Reduce and neutralize 70% of Scope 3 - upstream and downstream transport distribution emissions by 2025, compared to 2019;
- Reduce and neutralize 50% of Scope 3 - purchased raw materials and garments production emission by 2025, compared to 2019.
